Composite balustrades are perfect for defining the boundaries around front gardens and driveways. This deters passers-by from stepping onto a property, while still in-keeping with a beautiful street appeal to suit the house. In addition, our balustrades are a brilliant choice for decking edges and staircases as they provide a sturdy handrail for users, with minimal space in-between spindles to prevent falling through.

High-performance composition

The structural integrity of our balustrade system lasts longer as it will not rot, warp or splinter like wooden structures. This makes composite balustrading a weather smart and safe choice for domestic and commercial settings.
