

MAINTENANCE

■ CLEANING

Swish cellular PVC products are self-finished and essentially maintenance free.

An occasional wash with a non-scratch, mild detergent and water is beneficial in removing surface grime, maintaining a pristine appearance, especially in heavily polluted atmospheres.

As with other plastic based materials, solvents should NOT be used.

When cleaning, flood the surface to prevent ingraining of any dirt particles.

Exercise care to prevent contact with, and staining by creosote or bitumen-based products. Other common building materials are easily cleaned off without damage.

■ PAINTING

As with all PVC products, paint can adversely affect the impact strength of PVC sections, and the application of dark colours could lead to risk of thermal distortion.

■ REPAIRS

Swish cellular PVC can be cut and drilled using normal woodworking tools if repairs are required.

Scratches can be polished out using a progression of 180 to 360 to 1000 wet and dry papers. Finally, wash and polish with cream cleaner.
